lt;div>Shooting stars are very common. Rock from spa
ce regularly enters the Earth's atmosphere, with around one million shooting
 stars occurring every day around the world. To try to see a shooting star, the
sky should ideally be clear. The best way to see one is to stare at one point of
 the sky for around 20 minutes.</div></div></div></div>&

how can you tell the difference? The general rule-of-thumb is that natural meteo
r reentries happen quickly and typically last less than a few seconds while huma
n-made reentries happen slowly, and typically can last 20 □ 90 seconds or more.
