Shooting stars, or meteors, are caused by tiny specks of dust from space. These particles burn up / , 65 to 135 km above Earth's surface as they plunge at terrific speeds into the upper atmosphere, making the air / , glow as they pass.</div></div>

What is a shooting star? | Space fo r life</div></div>espacepourlav ie.ca : what-shooting-star</div></div></d

When a meteoroid enters Earth's upper atmosphe re, it heats up due to friction from the air. The heat causes / , gases around the meteoroid to glow brightly, and a meteor appears. Meteors are often referred to as shooting stars or / , falling stars because of the bright tail of light they create as they pass through the sky.</div></div
