loteria MW3 - SteelSeries steelseries :

The probability of a ball landing in bucke

t k is the number of paths to the bucket / , multiplied by the probability of each

path:  $p(k) = n! / k!(n - k)!$

Page 5 Clicker Question #1 / , For a 7-row

plinko, with 8 buckets labeled 0 to 7, what is the probability of a ball landin

g in / , bucket 1?

The Mathematics of the Board

At each level, the penny will / , be "knocked" either to the left or to

the right, each with a 50/50 probability.  $p(\text{left})^{n_1} p(\text{right})^{n_2}$

. But there will / , be many ways of taking  $n_1$  lefts and  $n_2$  rights over  $N$

levels. If all  $N$  choices are left, for / , instance, there is only one way.
