Shooting stars are very common

Rock from space regularly enters the Earth's atmosphere, with

around one million , shooting stars occurring every day around the world. To tr

y to see a shooting star, the sky should ideally be , clear. The best way to see

one is to stare at one point of the sky for around 20 minutes.

So, how , can you tell the difference? The ge

neral rule-of-thumb is that natural meteor reentries happen quickly and typicall

y last less than , a few seconds while human-made reentries happen slowly, and t

ypically can last 20 90 seconds or more.
